

KNOW YOUR CANNABINOIDS

CBD vs. CBG vs. CBN

Comparing the benefits and uses of cannabinoids available from hemp.

The wondrous hemp plant and its laundry list of beneficial compounds includes more than 100 cannabinoids that interact with the body and its systems. CBD is among the most widely understood and researched, and only recently have CBG and CBN been grown in sufficient proportions within hemp to be used for wellness purposes.

Each has its own unique properties and benefits. When used together, the three cannabinoids work synergistically to better nourish the body and promote optimal functioning.

CBD
(Cannabidiol)

CBG
(Cannabigerol)

CBN
(Cannabinol)

KNOWN AS

The “health and wellness cannabinoid”

The “mother cannabinoid”

The “sleepy cannabinoid”

USED FOR

Overall balance and wellness support

Mood support

Sleep aid

PSYCHOACTIVE EFFECTS

Non-intoxicating

Non-intoxicating

Non-intoxicating

HISTORY

First identified in 1940

First identified in 1964

First identified in 1940

HOW IT INTERACTS WITH THE ECS

Has a more indirect effect on cannabinoid receptor sites

Has a direct effect on cannabinoid receptor sites

Has a direct effect on cannabinoid receptor sites

CBD + CBG + CBN = A synergistic “entourage effect” of non-psychoactive cannabinoids
